Generators & Lighting Equipment

Selection Guide

We can help you match the generator with the equipment being powered. Below are helpful charts and information needed for you to select the correct generator for your job.

Electrical Requirements: What devices are you powering from your generator? What are the electrical requirements, voltage, amperage, (Running versus startup - see chart below) & phase? How much cord or cable will be used?

Environmental Factors: The actual output of a generator is effected by altitude & temperature. Please call us to be sure you receive the right unit for your job.
